

Retrospective Meeting Minutes:

In our last meeting, we went through our sprint 1 MVP and made a list of the changes we wanted to make to improve the product. We added these to the backlog and assigned them accordingly. We also discussed some style choices that we wanted to change, and some original ideas that we no longer thought would be feasible to implement.

Scrum Meeting 1:

In our first scrum meeting, we discussed the necessary manager and employee functionalities that we needed to implement. With this, we discussed style choices on manager pages. We assigned the creation and connection to the database for each of the manager pages. We also chose the APIs we wanted to use and assigned their implementations.

Scrum Meeting 2:

In our second scrum meeting, we looked over the preliminary manager pages that had been assigned to complete and discussed any changes in function or style that we wanted. We also reviewed the implementation of the APIs. We assigned the changes that we had decided on to team members to be implemented.

Scrum meeting 3:

In our final scrum meeting, we again reviewed the newly updated manager pages with the changes discussed in the last meeting. We then discussed the disability personas and decided to no longer implement the screen magnifier and chose/assigned the new personas to be implemented.
